Description

Orange brown sandy clay soil intermittent stone  
Forms majority of what on the surface appears to be a N-S  
running bank.  
Possible that bank completely ploughed out leaving good  
earthwork feature.

Description

Deposit of stiff purple red clay acting as a seal to 04  
stone lined feature  
Essentially this is redeposited material presumably dug out  
prior to insertion of stone.

Description

Linear stone lined and capped feature, a base of what appears on the surface to be a ditch to E of bank clay capping suggests this may not be a field drain but rather a culvert for carrying water, possibly to ponds in lower field.
