Description

Layer of red brown clay with a lot of stone, mostly small > 10cm. Some larger pieces. Abundant internal plaster pieces after partial excavation. Sand and loam come down to surface or more dense stone on which is a lot of pottery including pre-made from glazed ware and NDBTW also large quantities of cow bone

Description

First visible at surface of mortar [08] though 07 very thin at this point and may also be cut by [11]. Visible as circular feature with abundant stone and brown clay soil.  
On excavation proved to be fairly shallow  $\leq 0.30m$ . Sub circle  $0.90 \times 0.70m$  containing limestone fragments, lump of mortar in brown clay loam matrix.  
~~at this~~ most stone - ORS  
Finds include white ware cup fragment which fits those found in [07] above suggesting [11] cuts [07]. Base of [11] appears to be in-situ / undisturbed wall remains
