1. Introduction

In November 2011, Archaeology Wales was commissioned by Howell Richards to carry out a brief archaeological appraisal of the site of proposed development on Llanwnwr Farm, Goodwick, Pembrokeshire (NGR: SM 89530 40472; fig 1). The proposed development involves the conversion of existing farm buildings into dwellings for holiday lets (planning application no. NP/11/199).

Llanwnwr Farm lies within an area of high archaeological potential, and is thought to occupy the site of a medieval chapel and burial ground. Two early Christian inscribed stones are located within the farmyard, one of which is a Scheduled Ancient Monument. As a result, Zoe Bevans-Rice, Planning Archaeologist at Dyfed Archaeological Trust – Heritage Management, recommended that a brief appraisal of the site be carried out to determine whether further archaeological mitigation would be required during the development.

The appraisal involved a brief assessment of data recorded on the HER held by Dyfed Archaeological Trust, a brief map regression exercise and a rapid walkover survey. The work does not include an assessment of the potential significance of the site in the local, regional and national context, nor does it include an assessment of the impact of the proposed development on recorded archaeology in the local area.

2. Site Description

The proposed area of development lies within the farmyard of Llanwnwr Farm, close to the western edge of the Pencaer Peninsula, north Pembrokeshire, at around 64m AOD. The proposed work involves the redevelopment of three nineteenth century farm buildings on the northern and eastern sides of the farm complex (fig. 2). The three buildings comprise:

- a probable mill on the north-eastern side of the farmyard – this is positioned adjacent to the large mill pond and probably once had a water wheel driven mill wheel.
- A probable cart house on the southern side of the farmyard
- An agricultural shed on the northern side of the farmyard.

The site lies within the Pembrokeshire Coast National Park and immediately east of the Strumble Head to Llechdafad Cliffs SSSI.

3. HER Data

The HER lists 44 known or potential archaeological sites within a 1km radius of the proposed development area, including seven within the farm itself (fig. 3; see Appendix 1 for full listing).

3.1 Archaeological sites within Llanwnwr farm

Llanuonhour/Llanwnwr (PRN 12899)

The documented site of a medieval settlement on the site of the modern farm.

Llanwnwr/Llannuner (PRN 21741)

The post-medieval farmstead. Reputed to have been occupied by the French invasion force in 1797.

Llanwnwr Farm Inscribed Stone (PRN 2843; PE 072)

Group II ECM (cross-carved stone), of probable seventh to ninth century date or possibly later, standing in Llanwnwr farmyard. It was first recorded in 1883 when it was serving as a gatepost near the farmhouse. Llanwnwr Farm is the site of an early medieval/medieval cemetery (PRN 2871) and chapel (PRN 2872) and the stone may then be close to its original position, probably having functioned as a grave-marker. Associated with a second Group II ECM, (PRN 46824) also located in the farmyard.

Llanwnwr Farm Cist Grave Cemetery (PRN 2871)

Documented site of undated cist cemetery on Llanwnwr Farm where cist burials are said to have been revealed, prior to 1925, 'in the fold yard'. Some were recorded as 'containing ashes' suggesting the possible re-use of a Bronze Age cemetery. Associated with medieval Llanwnwr Chapel (PRN 2872), and two Group II ECMs (PRN 2843 and 46824).

Llanwnwr Chapel/St Gynyr's Chapel (PRN 2872)

Documented site of Llanwnwr Chapel, one of two former chapelries to Llanwnda parish, associated with undated cist cemetery (PRN 2871) and two Group II ECMs (PRN 2843 & 46824) on Llanwnwr Farm.

Llanwnwr (PRN 2879)

A probable early-medieval quern located within the farmyard.

Llanwnwr Farm Inscribed Stone

Group II ECM (cross-carved stone), of probable seventh to ninth century date or later, lying in Llanwnwr farmyard next to another Group II ECM (PRN 2843). It was first noticed in 1998 by the entrance to the farmyard, and had formerly served as a gatepost south of the farmhouse. Llanwnwr Farm is the site of an early medieval-medieval cemetery (PRN 2871) and chapel (PRN 2872) and the stone may then be close to its original position, probably having functioned as a grave-marker.

3.2 Archaeological Sites within a 1km radius of Llanwnwr Farm

Carreg Lwyd (PRN 10450)

The site of a possible Bronze Age standing stone 1km south-east of Llanwnwr Farm. Listing based on place-name evidence.

Caer Lem (PRN 10453)

A place name of unknown significance.

Strumble Head (PRN 11086)

A recorded findspot of a possible Iron Age, Roman or medieval quern on Strumble Head.

Rhosrowen (PRN 12320)

The documented site of a possible medieval settlement.

Ynys Meicel (PRN 13345)

Possible early medieval settlement observed on aerial photographs on Ynys Meicel, 800m to the north-northwest of Llanwnwr Farm. The earthworks apparently comprise an east/west orientated building, measuring approximately 15m by 5m, with an entry in the northern wall, leading to two rectilinear enclosures, possibly relating to an ecclesiastical site (with a pre-Conquest Michael dedication?) - or a deserted rural

settlement. On the ground a series of well-defined earthworks of regular buildings can be seen. The principal group comprise an oblong building with annexes to north and west. A smaller group of buildings lies some distance to the east. This whole complex is so well defined that a more recent date might be suspected. However its orientation and the islet location may suggest a medieval or early medieval date and religious function.

Strumble Head Lighthouse (PRN 24467)

Post-medieval lighthouse on Ynys Meicel.

Tresinwen Standing Stone (PRN 2610)

The site of a probable Bronze Age Standing Stone, now destroyed.

Tresinwen Standing Stone (PRN 2869)

The site of a probable Bronze Age Standing Stone, now destroyed.

Tresinwen Standing Stone (PRN 2890)

The site of a probable Bronze Age Standing Stone, now destroyed.

Carn Fawr/Pen Caer Strumble Head, Fishguard (PRN 28761)

Coastguard lookout, now demolished. Two storey, rectangular plan, stone walled ground floor, weather boarded first floor, large observation window in northwest wall wraps around into the southwest and northeast walls.

Quarry (PRN 30846)

Working in 1888, disused by 1905. On the 1868 map there is a quarry marked with its extents, but on the 1906 map there is nothing marked on the spot where this feature was. The 1964 map has a rough outcrop marked in the same place as the quarry was in the 1888 map, but no mention of it ever being a quarry.

Strumble Head (PRN 32085)

A modern military structure on the coastal slope overlooking Ynys Meicel. The area supports grass, gorse and bracken. It consists of a rectangular concrete slabs, measuring 1.5 by 3m, with metal fittings in the top.

Pwllong (PRN 32086)

A possible post-medieval quarry is cut into the edge of the coastal slope, which comprises enclosed pasture. It is a hollow, partly infilled with corrugated iron etc, measuring 12 by 5m across, depth unknown. There is a lot of surface irregularity to the east: it is uncertain whether this is natural or represents further infilled quarries.

Porthsychau (PRN 32090)

Probable Bronze Age standing stone. The feature lies on the coastal slope, here enclosed for rough pasture. There is a stream 20m to the east and a rock outcrop 10m to the north. An upright stone is of apparently triangular cross section, narrowing toward the top, measuring 0.6m by 0.3m across and 0.7m high. It is weathered but is too low and stubbly for a cattle rubbing stone (although it has been used as such in modern times, and the upper part is polished).

Strumble Head (PRN 32161)

Military building on the coastal slope. Single storey rectangular, brick built with concrete roof. One large chamber on eastern side with roof supported on pillars and

large openings to seaward and concrete beds with cable ducts. To the west are two chambers, a further three face seaward and have large windows, while one on the landward side has no windows. The function is unknown but it is probably connected with radar. A small bank running landward from the southwest corner may be contemporary. Renovated and uses as a bird observatory.

Ogof Melyn (PRN 32655)

A small post-medieval quarry pit.

Pwll Arian (PRN 32656)

Peat bog set at base of small valley bottom on top of sea cliffs. Dimensions of bog c.10m wide and 30m in length, depth of peat unknown.

Ogof y Drwg (PRN 32666)

Rectilinear field system of unknown date comprising low banks between cultivated fields and the cliff edge.

Carreg Onen (PRN 32667)

Several worked flints, including a thumbnail scraper, eroding out of a slope by the edge of the coastal path. Area under threat from visitor erosion.

Tresinwen (PRN 43855)

Probable Bronze Age standing stone. Monolith 1m high by 0.75 long by 0.5m thick. Appears to be well set into ground. A low earth boundary bank, fence topped, appears to have been built up to the stone, but does not properly incorporate it, suggesting that the stone may predate the bank and is not simply part of it. The stone itself is a rough conglomerate with large chert pieces set in a fine grey, oxidising material. A larger stone of similar type (PRN43856) stands 25m to ESE. A number of other, loose stones lay on the surface between the two stones and may signify that a more complex stone alignment once existed here.

Tresinwen (PRN 43856)

Probable Bronze Age standing stone. A substantial monolith over 1.5m high by 1.25m long and 1m thick. The stone is partly obscured by a bramble bush that grows around its base. Its antiquity is unknown, but it is noteworthy that the field boundary to the south appears to go around it and respect it (although it is equally possible that the stone was put up in the corner of the field after the boundary had been established). Nevertheless, this may be a prehistoric monument. The stone itself is a rough conglomerate with large chert pieces set in a fine grey, oxidised matrix. A smaller stone (PRN 43856) stands 25m to the north-northwest (PRN 43855). A number of other, loose stones lay on the surface between the two stones and may signify that a more complex stone alignment once existed here.

Tresinwen (PRN 43862)

Probable Bronze Age standing stone. Pointed standing stone, set at the edge of the field near a stream. The antiquity of the stone is unknown and it may be a relatively recent rubbing stone. Measures c.1.5m high and is triangular in cross-section.

Tresinwen (PRN 43863)

Modern churn stand located at the entrance to Tresinwen Farm.

Tresinwen Carthouse (PRN 43864)

Old carthouse at Tresinwen Farm. Stone built, slate roofed two-storey building in good condition. On a west-northwest/east-southeast axis. The arched doorway is in the north-facing wall. A set of stone steps built against the outside of the west-northwest gable wall leads to a doorway into the loft. A small stone lean-to is built against the east-southeast gable wall. Stands at the top (eastern) end of the modern Tresinwen farmyard. Does not appear on the 1843 parish tithe map, but shown on the 1891 OS map.

Tresinwen (PRN 43865)

Post-medieval outbuilding at Tresinwen farm. Original purpose unknown, but used as an implements shed and garage in recent years. Stone built, now with a corrugated asbestos roof. Some repair and modification undertaken in concrete blockwork. Not shown on 1843 parish tithe map, but present on 1891 OS map.

Tresinwen (PRN 43866)

Post-medieval outbuilding at Tresinwen farm. This building has been heavily modernised, but is shown on the parish tithe map of 1843, apparently as an outbuilding. However, the present owner says that the rear part of the building was a dwelling in the 18 or 19th century. In 1843, it was not part of Tresinwen, rather it is listed in the tithe schedule as part of the separate holding occupied by John Phillips. During the mid-20th century it was certainly an outbuilding and part of Tresinwen, but in 1973-4 it was modernised and turned into a dwelling, still occupied in 2001.

Tresinwen/Tydraw/Ty Isha (PRN 43867)

This is one of two post-medieval dwellings currently used within the modern Tresinwen farmstead, but this is named as the homestead on the 1843 tithe map. Has been known as Tydraw in recent decades to distinguish it from the house at the upper end of the farmyard, but at present it is known by the family as Ty Isha.

Tresinwen (PRN 43868)

Stone built post-medieval outbuilding at Tresinwen which is in two sections: i) a single storey former stable (now used for calf pens); ii) a two-storey building which now houses a grain store in the upper storey and grain mill on ground floor. A building is shown here on the 1843 tithe map. However, comparison of the tithe map and the 1891 OS map suggest that the two-storey part of the building was added to the lower part after 1843.

Tresinwen (PRN 43869)

Nineteenth century pigsty. Stone built, with some more modern repairs and modifications, such as a course of breeze blocks added to raise the wall plate and a corrugated asbestos roof. The pigsty does not appear on the 1843 parish tithe map, but is seen on the 1891 OS map.

Tresinwen (PRN 43870)

Post-medieval stone outbuilding in reasonably good condition, now with an asbestos roof. This is the "glowty" or cattle byre at Tresinwen. A building is shown on this spot and on the same east/west alignment on the parish to tithe map of 1843. The present building seems to be bigger than that shown in 1843 and on the 1891 and 1908 OS maps.

Tresinwen (PRN 43871)

Post-medieval lean-to has been built against the eastern gable wall of the byre at Tresinwen (PRN 43870). This extension does not appear on the 1908 OS map and is presumably a mid-20th century addition.

Tresinwen (PRN 43872)

Tresinwen Farm is a coastal dairy farm situated on the northern tip of the Pencaer peninsula in North Pembrokeshire. Its present boundaries include the tip of the peninsula, although most of the farm occupies the land south-east of this point, and is focused on the small cove of Porthsychan. The Ordnance Survey's Original Surveyors Drawings of 1814 show the farm as Rhosynwen. The development of the placename has been traced by BG Charles (Pembrokeshire Placenames) as far back as 1326, when the form Ros Rouwen (Rhonwen?) is documented in the Black Book of St Davids. By 1481 the name was documented as Roseronwen and all subsequent forms are similar to the Rhosynwen name of the 1814 map, although Tresynwen also appears as early as 1604. Why both forms should exist is unknown, but by the mid-nineteenth century it is clear that Tresinwen had become the accepted name. The earlier name does of course suggest that the land here was "arhos" or moorland during mediaeval times. It is not known when the land was improved and farmed.

Parc Carreg (PRN 4622)

A "Carreg" place-name on the parish tithe map that may indicate a standing stone existed here.

Carn Fawr (PRN 4644)

A probable Bronze Age round barrow.

Carreg Lwyd (PRN 59145)

Grade II listed cottage.

Strumble Head Lighthouse (PRN 59146)

Grade II listed lighthouse.

Former Lightkeepers cottages (PRN 59147)

Grade II listed cottages.

Llanwnwr Cromlech

19th century sources refer to a possible cromlech to the west of the farm, but the site has not been verified in modern times.

4. Map Regression

4.1 Tithe Map (fig. 4)

The Tithe Map of 1843 depicts the farm with several of the buildings that exist today. These include the main house and the probable cart house, while a building also exists on the site of the agricultural shed. This building is a rather different shape to the modern shed, and has a small enclosed field or paddock immediately to its north. The Tithe Apportionment document reveals that the farm was owned by John James and tenanted by Thomas Batine.

The fields belonging to the farm are listed as:

Field No.	Field Name	Agricultural Use
451	Cromlech	Pasture
452	Garden	
453	The Green	Pasture
454	Homestead	
455	Park y Pwll	Pasture
456	Penman	Meadow
457	Lower Wood	Wood
458	Upper Wood	Pasture
459	Old Meadow	Pasture
460	Park Fordd Eglws	Arable
461	Parc y Nant	Pasture

Of interest is the field named Cromlech, which indicates that there may have been a prehistoric burial mound to the north of the farmhouse. The field Park Fordd Eglws is also interesting as it suggests some association with a church. The area around the farm buildings is listed as The Green, possibly the area around which the medieval village was arranged. No features of apparent medieval date are depicted on the map.

4.2 OS 1st Edition Map (fig. 5)

The OS 1st Edition map of 1889 depicts the farm much as it exists today. The three buildings to be converted have been built by this time, and the mill pond and sluice associated with the probable mill are evidently in use. The southern-most of the buildings (the probable cart house) exists as a linear structure, without the extensions present at the western and eastern ends today. The agricultural shed on the northern edge of the farm has a small enclosed paddock area to its north. This is irregular in shape and probably pre-dates the construction of the building.

The area between the main farm buildings and the mill pond is marked as the location of the burial ground. In the area surrounding the farm a number of small irregular fields are depicted, these are probably medieval or early post-medieval in date and demonstrate the continuity of use of this farm.

4.3 Twentieth century maps (not reproduced)

The 1907 OS map shows that the extensions to the probable cart-house on the southern side of the farm had been built. The remainder of the maps of the farm from 1900 to 1978 show no changes occurring to the farm buildings. The site of the burial ground continues to be depicted as between the farm buildings and the mill pond.

5. Site Visit

A site visit was carried out on the 8th December 2011 to assess whether any evidence for recorded and unrecorded archaeological features was evident on the ground. The farm is located on an exposed area of land close to the western coast of the Pencaer Peninsula (fig 6). The buildings themselves are in a generally good condition and are currently used for storage. They all appear to be of nineteenth century date, constructed from stone and brick (fig. 7, 8 and 9). To the north of both the agricultural shed and the cart house are areas of hardstanding (fig. 7 and 8). A post-medieval field boundary is located immediately to the north of the agricultural shed – this is stone

built and of probable eighteenth century date, probably the wall of the small enclosure seen on the Tithe Map (fig. 4)

The probable mill is of two phase construction, with a small square stone-built structure to which a concrete covered extension has been added (fig. 9). The mill run is located on the western side of the building and is concrete lined. A scour channel runs in front of the mill building, flowing downhill to the north-east. Immediately to the south of the mill is the remains of the mill pond (fig. 7). This survives as a roughly square feature terraced into the slope, with stone walls defining the northern and eastern sides. The pond area is currently grass covered, with patches of bog grass. The area surrounding the mill building is also grass covered, with the modern septic tank located within the grassland area between the mill and the farmyard.

Undulating grassland surrounds all the farm buildings. The two medieval inscribed stones are stood up against the western side of the cart house, together with the 'quern' listed in the HER. No evidence for earthworks or features associated with the medieval use of the site were seen on the land surrounding the farm buildings.

6. Discussion and Conclusions

The rapid assessment of the HER data and cartographic sources has revealed that Llanwnwr Farm lies within an area of probable medieval occupation. The records suggest that a small settlement was located in this area, associated with a chapel and a burial ground. The presence of two incised early Christian stones on the farm, which would probably have been used as grave markers, attests to the religious significance of the site in the early medieval period. The HER lists a number of medieval sites within a 1km radius of the farm, indicating that the Pencaer Peninsula was relatively densely populated in the early Christian period.

The reported discovery of a cist cemetery on the farm in 1925 provides tentative evidence of the use of the Llanwnwr area for burial from perhaps the Bronze Age onwards – the exact location of the cist cemetery is not known (recorded simply as in the 'fold-yard'), nor is the morphology of the cists, however discussion of the recovery of cremated bone does point to a prehistoric date for these features. There are a number of prehistoric monuments recorded within wider landscape, including a Mesolithic flint scatter site, a possible Neolithic chambered burial monument, several probable Bronze Age standing stones and a find spot of possible Iron Age date. These monuments demonstrate that the Llanwnwr area has been a focus for occupation for the last 8000 years.

In the post-medieval period settlement continued at Llanwnwr, with the farmstead reported to have been used by the French army during the failed invasion of Britain in 1797.

The site visit revealed that the land immediately surrounding the buildings was grass covered and contained no identifiable earthworks or traces of earlier occupation. The burial ground is recorded on the maps as having been located to the east of the main farmhouse, in the area of the mill pond. If this is the case then it is likely to have been largely destroyed.

In conclusion, the modern Llanwnwr Farm is located in an area of high archaeological significance, with evidence for occupation from the prehistoric to the post-medieval period recorded for the site. The construction of the modern farm in the nineteenth

century is, however, likely to have had a major impact on the archaeological resource. The structures to be converted appear to be largely nineteenth century in date, containing no obvious evidence for earlier phases of construction.

7. Acknowledgements

Thanks to Howell and Guy Richards for the warm welcome at Llanwnwr Farm, and to Charles Hill for advising on the scope of works.

HISTORIC ENVIRONMENT FEATURES

Search criteria:

All HER data within a one kilometre radius of SM 89530 40472 - Llanwnwr

A search of the regional Historic Environment Record (HER) held by the Dyfed Archaeological Trust has identified the following historic environment features. These are listed and described below. Each feature is allocated a Primary Record Number (PRN) that should be quoted in any correspondence. Where the identification of a site is not certain then all possible interpretations are given in the type field e.g.'enclosure, henge'. Possible date ranges are also shown in this way in the period field. If a field contains no information then it is either not recorded, not known or not applicable for that site.

Please contact the HER if you have any further questions regarding this information, if you would like any of the sources followed up or if you have information that could improve these records in any way.

SUMMARY

Group II ECM (cross-carved stone), of probable 7th-9th century date or possibly later, standing in Llanwnwr farmyard. It was first recorded in 1883 when it was serving as a gatepost near the farmhouse. Llanwnwr Farm is the site of an early medieval-medieval cemetery (PRN 2871) and chapel (PRN 2872) and the stone may then be +/- in situ, probably having functioned as a grave-marker. Associated with a second Group II ECM, PRN 46824 NDL 2003, from Edwards forthcoming

SUMMARY

The feature is cut into the edge of the coastal slope, which is here enclosed pasture. It is a hollow, partly infilled with corrugated iron etc, measuring 12 x 5m across, depth unknown. There is a lot of surface irregularity to the east: it is uncertain whether this is natural or represents further infilled quarries. Of limited significance. No further action recommended. GW. 1996.

CONDITION Near Intact **STATUS** *None recorded* **FORM** O.struct

SUMMARY

The feature lies on the coastal slope, here enclosed for rough pasture. There is a stream 20m to the east and a rock outcrop 10m to the north. An upright stone is of apparently triangular cross section, narrowing toward the top, measuring 0.6 x 0.3m across x 0.7m high. It is weathered. It is too low and stubbly for a cattle rubbing stone (although it has been used as such and the upper part is polished). GW. 1996.

SUMMARY

Describe by Thomas, on coastal slope. Single storey rectangular, brick built with concrete roof. One large chamber on east, with roof supported on pillars and large openings to seaward and concrete beds with cable ducts. To the west are two chambers, three seaward with large windows, the landward with no windows and on engine bed. Thomas is not sure of the function but it is probably connected with radar. A small bank running landward from the southwest corner may be contemporary. Renovated and uses as a bird observatory. GW. 1996.

CONDITION Near Intact **STATUS** *None recorded* **FORM** Other Structure

SUMMARY

Monolith. C.1m high x 0.75 long x 0.5m thick. Appears to be well set into ground. A low earth boundary bank, fence topped, appears to have been built up to the stone, but does not properly incorporate it, suggesting that the stone may predate the bank and is not simple part of it. The stone itself is a rough conglomerate with large chert pieces set in a fine grey, oxidising material. A larger stone of similar type (PRN43856) stands 25m to ESE. A number of other, loose stones lay on the surface between the two stones and may signify that a more complex stone alignment once existed here. RPS November 2001

SUMMARY

A substantial monolith, over 1.5m high x 1.25 long x 1m thick. The stone is partly obscured by a bramble bush which grows around its base. Its antiquity is unknown, but it is noteworthy that the field boundary to the south appears to go around it and respect it (although it is equally possible that the stone was put up in the corner of the field after the boundary had been established. Nevertheless, this may be a prehistoric monument. The stone itself is a rough conglomerate with large chert pieces set in a fine grey, oxidised matrix. A smaller stone (PRN 43856) stands 25m to the north-northwest (PRN 43855). A number of other, loose stones lay on the surface between the two stones and may signify that a more complex stone alignment once existed here. RPS November 2001

CONDITION Restored **STATUS** *None recorded* **FORM** Building

SUMMARY

This building has been heavily modernised, but is shown on the parish tithe map of 1843,

apparently as an outbuilding. However, the present owner says that the rear part of the building was a dwelling in the 18 or 19th century. In 1843, it was not part of the George's Tresinwen, rather it is listed in the tithe schedule as part of the separate holding occupied by John Phillips. During the mid-20th century it was certainly an outbuilding and part of Tresinwen, but in 1973-4 it was modernised and turned into a dwelling, still occupied in 2001.

SUMMARY

Stone built outbuilding at Tresinwen which is in two sections: i) a single storey former stable

(now used for calf pens); ii) a two-storey building which now houses a grain store in the upper storey and grain mill on ground floor. A building is shown here on the 1843 tithe map. However, comparison of the tithe map and the 1891 6 OS map suggest that it is possible that the two-storey part of the building was added to the lower part after 1843

SUMMARY

Tresinwen Farm is a coastal dairy farm situated on the northern tip of the Pencaer peninsula in North Pembrokeshire. Its present boundaries include the tip of the peninsula, although most of the farm occupies the land south-east of this point, and is focused on the small cove of Porthsychan. The Ordnance Survey's Original Surveyors Drawings of 1814 show the farm as Rhosynwen. The development of the placename has been traced by BG Charles (Pembrokeshire Placenames) as far back as 1326, when the form Ros Rouwen (Rhonwen?) is documented in the Black Book of St Davids. By 1481 the name was documented as

Roseronwen and all subsequent forms are similar to the Rhosynwen name of the 1814 map, although Tresynwen also appears as early as 1604. Why both forms should exist is unknown, but by the mid-19th century it is clear that Tresinwen had become the accepted name. The earlier name does of course suggest that the land here was arhos" or moorland during mediaeval times. It is not known when the land was improved and farmed
