

**UPLANDS ARCHAEOLOGY INITIATIVE
PROJECT 2012-2013:
CWM PRYSOR SURVEY AREA**

LANDSCAPE SURVEY REPORT

Report Number 2013/8 April 2013

ArcHeritage is a trading name of York Archaeological Trust. The Trust undertakes a wide range of urban and rural archaeological consultancies, surveys, evaluations, assessments and excavations for commercial, academic and charitable clients. We manage projects, provide professional advice and fieldwork to ensure a high quality, cost effective archaeological and heritage service. Our staff have a considerable depth and variety of professional experience and an international reputation for research, development and maximising the public, educational and commercial benefits of archaeology. Based in York, Sheffield, Nottingham and Glasgow the Trust's services are available throughout Britain and beyond.

SUMMARY

An archaeological survey was undertaken at Cwm Prysor between May and October 2012 by ArcHeritage, on behalf of the RCAHMW. The survey was undertaken as part of the Uplands Survey Initiative. Part of the survey was undertaken by students of the University of Sheffield as a field school for an MA in Landscape Archaeology. The project comprised desk-based assessment and a field identification survey to a Level 1 standard.

The Cwm Prysor survey area, centred on SH 759 343, is located to the southeast of Trawsfynydd, in the Unitary Authority of Gwynedd and within Snowdonia National Park. It covers an area of 25.173 km². The majority of the survey area was part of the Trawsfynydd Military Range during the first half of the 20th century. The eastern extent of the survey area is part of the Migneint-Arenig-Dduallt SSSI. The height above sea level varies from 240m to 620m.

The desk-based research identified 83 known archaeological sites within the survey area, including two prehistoric to Romano-British settlement sites, a possible prehistoric or medieval deserted rural settlement, gold mines, Roman roads and a Roman tile kiln, and post-medieval farmsteads. The survey identified a total of 1540 sites, including the previously recorded sites. Not all of the previously recorded sites were identified on the ground.

The survey identified a further prehistoric hut group and a cairnfield, the latter being a rare example of this type of site within the area. Further possible hut sites were recorded, though these could not be conclusively identified as prehistoric. Possible burial mounds were also identified. Only one medieval longhouse site was recorded, though further structures and field boundaries may have had a medieval origin. These were located in the vicinity of the proposed deserted rural settlement, and further survey is recommended in this area to record the features in more detail.

A total of 994 sites of probable post-medieval date were recorded. These mainly relate to agriculture and subsistence, and comprise seven farmsteads, around 100 sheep folds and stock enclosures, field boundaries, track ways and ponds. Industrial post-medieval sites included small quarries, copper and gold mines, and numerous peat cuttings. The farmsteads were all located on the lower ground to either side of the Afon Gain, and may have originated in the late medieval to early post-medieval periods. They were abandoned in 1905 in association with the purchase of the land by the War Department.

A large proportion of the modern sites related to military training, including firing range blockhouses, telecommunications structures and gun emplacements associated with artillery training. There were also practice trenches, bunkers, slit trenches and fox holes characteristic of First World War infantry training. Much of the area is covered by shell and mortar craters. Other modern sites related to stock management and transport routes.

CRYNODEB

Cyflawnwyd arolwg archaeolegol yng Ngwm Prysor rhwng mis Mai a Hydref 2012 gan ArcHeritage ar ran CMCH, ar gyfer Menter Archaeoleg yr Ucheldir. Cafodd rhan o'r ardal ei arolygu gan myfyrwyr Prifysgol Sheffield ar gyfer eu cwrs MA mewn Archaeoleg Tirwedd. Roedd y prosiect yn cynnwys asesiad dogfenol a gwaith maes arolygol i safon Lefel 1.

Lleolir Cwm Prysor i'r de orllewin i Drawsfynydd, o fewn Parc Cenedlaethol Eryri yn Awdurdod Leol Gwynedd (SH 759 343). Mae'n gorchuddio ardal o 25.173 km². Roedd y mwyafrif o'r ardal arolwg yn ran o randir milwrol Trawsfynydd yn ystod haner cyntaf yr 20^{fed} ganrif. Mae'r rhan dwyreiniol yr ardal arolwg yn rhan o SoDdGA Migneint-Arenig-Dduallt. Mae ei uchder yn amrywio o 240m i 620m uwch lefel y môr.

Darganfyddwyd 83 safle archaeolegol a oedd wedi eu cofnodi eisioes drwy'r asesiad dogfenol, gan gynnwys dau drefetigaeth o'r cyfnod cyn-hanesyddol neu'r oes Rufeinig, safle treftigaeth anial gwledig o bosib yn dyddio o'r cyfnod cyn-hanesyddol neu'r canol oesoedd, cloddfeydd aur, ffyrdd ac odynau Rhufeinig a ffermdai ôl-ganoloesol. Gan gyfri'r safleoedd ag adnabyddwyd eisioes, darganfyddwyd gyfanswm o 1540 safle archaeolegol gan yr arolwg. Nid oedd yn bosib i ail-ddarganfod pob un o'r safleoedd darganfyddwyd eisioes.

Ymyst y safleoedd newydd, datgelwyd un treftigaeth cyn-hanesyddol, a chae carneddau sydd yn enghraifft brin iawn o fewn yr ardal leol. Er y recordiwyd nifer o safleoedd cytiau eraill, nid oedd yn bosib cadarnhau ei hoes i'r cyfnod cyn-hanesyddol. Hefyd, darganfyddwyd esiamplau o dalpiau claddu posibl. Er mai ond un enghraifft o dŷ-hir o'r canol oesoedd a gofnodwyd gan yr arolwg, mae'n bosib fod nifer o adeiladau ac olion maesydd o'r cyfnod hwn, yn enwedig y safleoedd wrth yml y safle treftigaeth anial gwledig - awgrymir cael arolwg manwl o'r ardal hwn.

Roedd cyfanswm o 994 o safleoedd sy'n debygol o fod yn dyddio i'r cyfnod ôl-ganoloesol. Roedd y rhan fwyaf ohonynt yn ymwneud a weithgareddau amaethyddol a chynhaliaeth, gan gynnwys saith safle ffarm, tua 100 o gorlanau, olion maes, llwybrau cerbyd a phyllau dŵr. Mae'r engreifftiau o safleoedd diwydianol yn cynnwys chwareli bach, cloddfeydd copr ac aur, a thoriadau mawn niferus. Roedd y ffermydd i gyd wedi eu lleoli ar y tir isel wrth yml ochrau'r Afon Gain, ac o bosib yn tarddu o'r canol oesoedd hwyr neu yn gynar yn y cyfnod ôl-ganoloesol. Cafodd y rhan fwyaf o'r adfeilion hyn eu gadael yn 1905 pan prynwyd y tir gan yr Adran Ryfel.

Mae rhan helaeth o'r safleoedd modern yn ymwneud â hyfforddi milwrol, gan gynnwys adeiladau llechu ffrwydro, safleoedd cyfathrebu a safleoedd yn ymwneud a hyfforddiant i ddefnyddio magnelau. Roedd hefyd ffosydd ymarfer, a bynceri sydd yn arwyddocaol o hyfforddiant ar gyfer y Rhyfel Byd Cyntaf. Gorchuddir ardal eang a thyllau mortar. Mae'r safleoedd modern eraill yn ymwneud a rheoli anifeiliaid a llwybrau trafndiaeth.

Nobody is entitled to rely upon this Report other than the person/party which commissioned it. YAT accepts no responsibility or liability for any use of or reliance upon this Report by anybody other than the commissioning person/party.

1 INTRODUCTION

This report presents the results of upland identification survey undertaken at Cwm Prysor by ArcHeritage in 2012. The work was funded by a grant from the Royal Commission on the Ancient and Historical Monuments of Wales (RCAHMW), as part of the Uplands Archaeology Initiative. The survey was undertaken to identify and record archaeological features within an area of 25.173 km², located to the south of the Afon Prysor and southeast of Trawsfynydd, in Snowdonia National Park, Gwynedd, Wales. The survey product also includes a database of recorded sites, a summary of which is given in Appendix 2. A total of 1540 sites were recorded by ArcHeritage and by Landscape Archaeology MA students from the University of Sheffield.

2 LOCATION, TOPOGRAPHY AND GEOLOGY

The survey area (centred on NGR SH 759 343) is located 1km to the southeast of Trawsfynydd and east of Bronaber, 15km north of Dolgellau and 17km west of Bala (Figure 1). It is within the Unitary Authority of Gwynedd and former county of Merioneth. It covers an area of 25.173 km² (2520 hectares) comprising rolling, mountainous land on the south side of Cwm Prysor, stretching from Moel Ddu in the southwest to Moel y Slates and Llyn Tryweryn in the northeast. The survey area is bordered by Forestry Commission land on the south and east sides. The majority of the survey area was part of the Trawsfynydd military firing range for the first half of the 20th century. Part of the land is in common ownership, whilst the rest is privately held. The survey area is within the Snowdonia National Park, and the eastern extent is part of a Site of Special Scientific Interest (Migineint-Arenig-Dduallt SSSI 31WNR).

The height above sea level of the survey area varies from 240m at Pont Dôl y Mynach to 620m at Gallt y Daren and Foel Boeth. The underlying geology comprises mudstone, siltstone and sandstone of the Maentwrog, Gamlan, Clogau and Ffestiniog Flags Formations of the Cambrian period, with localised unnamed intrusions of igneous rocks of the Ordovician-Microtonalite periods. The bedrock is overlain by Devensian glacial till deposits (Howells 2008).

3 METHODOLOGY

3.1 Aims

The overall aim of the Uplands Archaeology Initiative is to promote a wider and deeper understanding of the archaeology and history of the uplands of Wales through survey, research, synthesis and publication. To achieve this, surveys have been initiated for areas where there are significant gaps in the existing archaeological record, where clear partnership advantages exist for landscape management or where the upland area is subject to direct threat.

3.2 Methodology

All work was undertaken in line with a project design produced by ArcHeritage (2011). The project design was prepared in response to tender documentation provided by the RCAHMW. Survey of part of the site was undertaken by Landscape Archaeology MA students from the University of Sheffield.

3.2.1 *Documentary Survey*

The preliminary stage of the project involved desk-based research. Information on known archaeological sites and previous archaeological recording projects was collected from the Gwynedd Archaeological Trust (GAT) Historic Environment Record (HER) and the National Monuments Record of Wales (NMRW). Digital data provided by the NMRW included aerial photographic mapping and historic OS maps. In addition to this, aerial mapping of features visible from Google Earth was undertaken prior to the start of the fieldwork.

3.2.2 *Field Survey*

The ArcHeritage identification survey was undertaken by Rowan May, Tudur Davies and Toby Pillatt, with assistance from Landscape Archaeology MA students Amy Farrington-McCabe and Eugene Costello, who had work placements with ArcHeritage. The project was managed by Anna Badcock. The field survey was carried out intermittently over a period of 25 days from May to October 2012. The survey was undertaken to a Level 1 standard as defined by English Heritage (2007). This is a basic survey providing information on the location, type, date and condition of features, and is aimed at the discovery of previously unrecorded sites. Sites that have previously been recorded, either from field survey or aerial photographic mapping, were also recorded at the same level of detail as newly recorded sites, to add to existing information. Where previously recorded sites could not be found on the ground, this has been noted.

The field survey was undertaken using handheld computers (Fujitsu Siemens Pocket Loox) containing integral GPS with a horizontal accuracy of <10m. Each handheld computer contained ArcPad GIS uploaded with the following shapefile layers:

- OS mapping;
- Plot of AP features;
- 450m contour polylines;
- GAT HER sites;
- RCAHMW NMR site;
- Property boundaries.

Each member of staff was equipped with a handheld computer with work conducted individually or in small groups. Tracking transects were conducted at 30m and 50m intervals according to altitude and topography. Access to the survey area was prearranged with landowners, with a minor road providing vehicle access to the southern and eastern extents of the study area, and the A4212 providing access to the northern extent. The centre of the area was accessed on foot using footpaths and track ways.

An eight-figure grid reference has been recorded for all features, with the grid reference taken at the centre of the site, where possible. In accordance with the RCAHMW Revised Data Standard For Upland Survey (2004), all features were assigned a National Primary Record Number (ID) as allocated by the RCAHMW; multiple features in close proximity and with apparent association to one another were assigned a single number only. Complexes of extensive related features were given an overall number as well as individual feature numbers.

Microsoft Excel was used for recording attribute data in the field, allowing for the continuation of work independently of weather conditions, as well as the recall of previous data on site.

Digital images were taken of features where deemed appropriate, and field sketches were made where this aided the written description. Sites which had the potential for programmes of environmental sampling were also identified and recorded. Following the completion of fieldwork, the spreadsheet was used to compile tables for the Access database which forms the final product of the survey. Fields within the database follow the format provided in the Revised Data Standard for Upland Survey (RCAHMW 2004).

The University of Sheffield survey was undertaken by Landscape Archaeology MA students under the direction of Dr. Robert Johnston. This formed a series of field schools in landscape survey techniques, undertaken for a period of ten days a year from 2008-2012. The survey utilised the same general recording methodology, with transects walked at 30m or 50m and recording of points undertaken using the Fujitsu Siemens Pocket Loox handheld computers. Attribute data was recorded on pro-forma sheets, which have been transcribed into the overall survey database for this project. A field check of the survey area was undertaken by ArcHeritage to test the results of the University of Sheffield survey.

4 ARCHAEOLOGICAL AND HISTORICAL BACKGROUND

4.1 Prehistoric to Romano-British

There are no known Palaeolithic to Neolithic sites within the survey area. This may be partially due to peat deposits obscuring earlier sites (GAT 2007). Environmental sampling from the uplands of nearby Arduwy have indicated that the area was heavily forested prior to the 4th millennium BC, suggesting that the area would be difficult to exploit, and possibly accounting for a low population in the area at the time (Chambers and Price 1988).

Neolithic to Bronze Age remains recorded in the Trawsfynydd area comprise worked flint, burnt mounds and burial cairns, as well as a standing stone of unknown date at Llech Idris, just to the southwest of the survey area. Within the survey area, one hut circle settlement has been recorded at Craiglaseithin (NMR NPRN 275907). The settlement is characteristic of the prehistoric period, and could be Bronze Age to Romano-British in date. An enclosed settlement has been recorded at Ffridd Bod-y-Fuddau (NPRN 303057), interpreted as late Romano-British, with cultivation features nearby which could be of prehistoric to medieval date (NPRN 308959, 401164). There are also longhouse features nearby which could relate to Romano-British to medieval settlement (NPRN 91976). Further possible hut circles of unknown date have been recorded at Afon Gain (HER PRN 5268).

The survey area is crossed by at least two Roman roads, running from the important Roman fort at Tomen y Mur to Brithdir and Caer Gai. The road to Brithdir runs along the western edge of the survey area in a north-south alignment, and much of this route is classified as 'known'. The route to Caer Gai is aligned roughly east-west across the northern part of the survey area and is less well-preserved, with two short 'known' sections in the vicinity of Moel yr Wden, whereas the majority of the route is 'proposed' or 'predicted' (Hopewell 2004). Other Roman features recorded within the survey area comprise three tile kilns near the north-south road at Pen y Stryd (NPRN 303042), and possible mounds associated with the same road at Bryn Llefrith (HER PRN 5269), as well as building foundations at Moel y Slates (HER PRN 4274).

4.2 Medieval

In the medieval period, the south-eastern part of the survey area was within Cwm Cedryn monastic grange, associated with the Cistercian abbey of Cymer, Dolgellau (Williams 1990). The Afon Gain formed part of the probable boundary of the grange. A possible copper bloomery site at Gelli Goch to the south of Bronaber and southwest of the survey area (HER PRN 5494), may be associated with the abbey. The parish of Trawsfynydd was within the commote of Ardudwy Uwch Artro in the medieval period. The parish was recorded as one of the poorest in the county in the Merioneth Lay Subsidy Roll of 1292-3, probably due to acidic upland soils which prevented intensive agriculture (Williams-Jones 1976). Castell Prysor (HER PRN 4271) is located on a rocky mound in the valley bottom to the north of the survey area. Little is known about this castle from documentary sources; it is thought to have been constructed by the Welsh, and a letter was addressed from Castell Prysor by Edward I in 1284. The castle is likely to have been an important base, and was probably the *llys* of the commote at the end of the 13th century. The castle would have dominated the Cwm Prysor valley, which was one of the major medieval routes into the heartland of Gwynedd (GAT 2007).

Some of the farms along the southern side of Cwm Prysor, just outside the survey area, are likely to have originated in the medieval period (GAT 2007). The deserted rural settlement remains at Ffrïdd Bod-y-Fuddau (NPRN 91976) may relate to medieval settlement, though this is unclear. In the wider area, medieval building remains have been recorded to the north of Afon Prysor, and to the south of Llyn Trawsfynydd, but apart from the possible settlement at Ffrïdd Bod-y-Fuddau, no medieval structures have been recorded within the survey area.

4.3 Post-Medieval

In the 17th century, the land in Trawsfynydd parish was described as being so poor that over half the parish was not cultivated. The pasture land was indifferent, though there were bogs with excellent turves and heath for grazing sheep and cattle. Crops grown included oats, rye and barley (Lhwyd 1911). The 1840 tithe apportionment showed just five 'large' landowners in the parish, with the majority of farms owned by individuals. The pattern of some of the field walls along the southern side of Cwm Prysor suggest medieval or early post-medieval enclosure, though the majority of the area is likely to have been enclosed in the late 18th to early 19th centuries. Evidence for possible medieval enclosure is visible in the field walls of Yr Ysgwyn, Bod-y-Fuddau and Bronasgellog farms, located along the northern edge of the survey area (GAT 2007). Houses at Bronasgellog and Yr Ysgwrn are recorded in the mid-17th century, and the former had an formal garden, unusual in the area, depicted on the 1840 tithe map. The unenclosed land around Moel Ddu and Moel Oernant is shown on the tithe map as Llechwedd Gain Common, with Gallt-y-Daren Common further to the north above Moel Uchaf Dôl-Haidd.

The valley of the Afon Gain within the survey area contains the remains of a number of farmsteads, located in relatively close proximity to each other, with around 10 farmsteads and associated enclosures within a c.3km stretch of valley (Burnett 2006). There are also numerous sheepfolds scattered across the region, with no obvious associations to farmsteads. The absence of any cow sheds associated with structures in the Cwm Prysor survey area suggests that pastoral practices largely revolved around sheep, possibly indicative of the land's inability to support large numbers of cattle.

The term 'ffrîdd' occurs frequently in place-names within the survey area (e.g. Ffrîdd Dôl y Moch, Ffrîdd Ddu, Ffrîdd Wen, Ffrîdd Bod-y-Fuddau). In Welsh, this term is heavily associated with upland rough pasture. It is derived from Middle English and usually refers to moorland or uncultivated land on the periphery of settlements which has seasonal usage (Davies 1984, 79; Longley 2006, 76). The term appears in Welsh around the 14th century, expanding in use between the 15th and 17th centuries (Longley 2006, 76). Its common use within the survey area may suggest that the majority of the farmsteads originated in this period.

4.4 Modern

A small military camp was established at Bryn Golau at the turn of the 20th century, just to the north of Yr Ysgwrn. A larger, more permanent site was established at Rhiw Goch in 1906, to the west of the survey area. Land in the surrounding area was purchased by the War Department for artillery practices, with 8,020 acres owned within Traswfyndd parish by the start of the First World War. The range was cleared of inhabitants to allow both 'dry' and live fire training exercises, resulting in the abandonment of the farmsteads within the Gain Valley (Burnett, 2006).

During the war, the range was used for artillery practice and training, and prisoners of war as well as soldiers were housed at the camp. The civilian settlement at Bronaber developed mainly to service the military camp. During the Second World War, the camp was again used to house prisoners, mainly Italian, and tents were replaced by more permanent structures. By 1948 the range had been extended to c.8403 acres. The camp was closed in 1957-8, but was used shortly afterwards to house construction workers building the Trawsfynydd power station, and later became a holiday cabin settlement. Following closure of the military camp, sections of the firing range were purchased by the Forestry Commission, whilst others were closed off due to the presence of unexploded ordinance. Attempts have since been made by the Ministry of Defence to clear the region of potential munitions threats, with areas of cleared land subsequently becoming rough pasture for grazing livestock.

The farm Yr Ysgwrn on the northwest edge of the survey area was the home of the war poet Hedd Wyn (Ellis Humphrey Evans), 1887-1917, a noted poet and bard, who was posthumously awarded the Eisteddfod chair in 1917. The chair was awarded for his poem on the subject of 'Yr Arwr', the Hero, which was composed in Belgium after he had been called up into the army. Hedd Wyn died at Passchendale a month before the Eisteddfod. The farm has recently been granted to the National Trust and the old farmhouse is a listed building. Land belonging to the farm falls within the survey area.

5 RESULTS

A summary of the overall results of the survey is given in Section 5.1, with a more detailed description of the type of sites recorded for each period given in Section 5.2. A summary list of all the surveyed sites is given in Appendix 2.

5.1 Overall survey results

5.1.1 *Comparison of previously known and surveyed sites*

The survey examined previously known as well as known sites. A total of 83 sites had been recorded previously and the survey recorded 1540 sites in total. The majority were individual sites, though there were also several complexes of settlement and agricultural features. A list

of known and surveyed sites by period is given in Table 1 below. The list of known sites is slightly skewed as sections of Roman roads (known, proposed and predicted) have multiple HER records, and most of the predicted or proposed routes do not have corresponding physical features. The number of Roman sites recorded during the survey is therefore lower than the total number of 'known' Roman sites. There were also 'known' sites recorded from documentary sources (such as historic maps and aerial photographs) that could not be identified on the ground. This included a number of boundary stones shown on historic OS mapping that were not found during the survey, as well as cultivation ridges visible on aerial photographs that were not visible at ground level, possibly due to vegetation conditions. A plan showing the distribution of all features identified during the survey is given in Figure 2.

A more detailed list of the known sites and their corresponding survey record is given in Appendix 1, including sites which were not located during the survey. Where sites had existing NMR PRNs, these were used during the survey. If the surveyed site could not be conclusively identified as the site already recorded it has been given a new NPRN, with the previous NPRN cross-referenced in the Short Text description.

Table 1: Total number of known and surveyed sites

Period	Known sites (NMR/HER)	Surveyed sites
Prehistoric	4	10
Prehistoric?		42
Iron Age	1	5
Roman	25	8
Medieval	1	1
Post-Medieval	24	321
Post-Medieval?		672
Modern	1	247
Modern?		48
Multiperiod		5
Unknown	27	181
TOTAL	83	1540

5.1.2 *Surveyed sites by period*

A list of the range of sites surveyed by period is given in Table 2 below. The majority of sites (64%) recorded were post-medieval (321 sites) or probably post-medieval (672). Modern (247) or probably modern (48) sites accounted for 19% of the recorded sites, and sites of unknown period (181) comprised 12% of the surveyed sites. Sites that were identified as or likely to be of prehistoric to medieval date formed 5% of the surveyed sites. The distribution of sites by period is shown in Figure 3.

Table 2: Surveyed sites by period

Period	Number	Feature Types
Iron Age	5 (0%)	Elements of Ffridd Bod-y-Fuddau Enclosed Settlement - banked enclosure, bank, round house, hollow way
Prehistoric	10 (1%)	Bank, banked enclosure, field system, hut circle, hut circle settlement
Prehistoric?	42 (3%)	Bank, boundary bank, barrow?, cairn, cairnfield, hut circle, mound, platform, ring cairn?
Roman?	8 (1%)	Tile kiln, track way, Roman road
Medieval?	1 (0%)	Longhouse
Post-Medieval	321 (21%)	Bank, barn, boundary bank, bridge, ditch, enclosure, farm building, farmstead, field, field boundary, mine level/gold mine/trial mine, peat cutting, pond, quarry, revetment, sheep fold, sheep pen, sheep shelter, shelter, stock enclosure, structure, track way, wall
Post-Medieval?	673 (43%)	Mine level/trial mine, bank, boundary bank, boundary wall, bridge, cultivation ridges, culvert, ditch, enclosure, farmstead, field boundary, hollow, hollow way, kiln, leat, linear feature, mound, peat cutting, platform, pond, quarry, revetment, sheep fold, sheep pen, sheep shelter, shelter, spoil heap, standing stone, stock enclosure, stone pile/spread, structure, track way, wall
Modern	247 (16%)	Bank, bridge, building platform, bunker, culvert, feature, fence, firing range, firing range blockhouse, flagpole/marker post, military road, OS marker, pipeline, platform, pond, practice trench, road, sheep fold, sheep shelter, shelter, spoil heap, standing stone, stone pile, storeroom, structure, telecommunication structure, telegraph pole, track way, wall, weapons pit
Modern?	48 (3%)	Bank, bunker?, cairn, drainage ditch, enclosure, field boundary, ford, gun emplacement, hollow, linear feature, mound, peat cutting, pond, quarry, shelter, shooting stand?, stone pile/spread, structure, track way, wall
Multiperiod	5 (0%)	Bridge, cairn, sheep shelter, track way
Unknown	181 (12%)	Bank, boundary bank, building platform, cairn, cist?, clearance cairn, cultivation ridges, culvert, ditch, enclosure, hollow, hollow way, hut circle?, hut circle settlement?, hut platform?, linear feature, marker stone, mine shaft, mound, peat cutting, platform, pond, quarry, ring cairn?, sheep fold, sheep shelter, shelter, standing stone, stock enclosure, stone pile/spread, structure, track way, wall

5.1.3 Altitude range of sites

Table 3 shows the number of sites recorded within 50m ranges of altitude. The highest number of sites were recorded between 300m and 399m above Ordnance Datum (60%), divided into 29% between 300-349m and 31% between 350-399m. This represented 47% of the total land area. By comparison, the 240-299m range comprised 8% of the total area and 5% of sites, the 400-499m range comprised 34% of the total area and 23% of the sites, and the 500-620m range comprised 9% of the area and 14% of sites.

The table also gives the range and number of site types recorded for each altitude band. All of the farmsteads and most of the farm buildings were within the 300-399m range, whilst sites on the higher land mainly related to industrial extraction, military training and sheep husbandry.

Table 3: Range of sites by altitude

Altitude	Number	Land area	Feature types
200-249m	4 (0%)	2 (0%)	Bank (2); ditch, military road (1)
250-299m	120 (8%)	132 ha (5%)	Bank (14); track way (9); field boundary, mound, weapons pit (8); bridge (7); cultivation ridges, quarry, structure, telecommunication structure (5); boundary bank, culvert, stone pile/spread (4); fence, pond, sheep fold (3); building platform, ditch/drainage ditch, practice trench, sheep pen, stock enclosure, telegraph pole, trial mine (2); barn, enclosure, hollow, linear feature, marker post, military road, peat cutting, platform, road, shelter, wall (1)
300-349m	445 (29%)	498 ha (20%)	Bank (47); field boundary (44); track way/hollow way (39); weapons pit (38); boundary bank (31); wall (30); sheep fold (21); cairn/cairnfield (20); quarry (17); hollow (13); peat cutting, structure, trial mine (8); pond (7); bridge, ditch/drainage ditch, farmstead, linear feature, revetment (6); cultivation ridges, culvert, pipeline, platform, sheep pen, stone pile/spread (5); building platform, practice trench, sheep shelter (4); enclosure, feature, firing range blockhouse, telecommunications structure (3); boundary wall, farm building, field, gold mine, marker post, mound, shelter, spoil heap (2); banked enclosure/enclosed settlement, barn, bunker, firing range, gun emplacement, hut circle, leat, longhouse, round house, standing stone, stock enclosure, storeroom, tile kiln (1)
350-399m	470 (31%)	674 ha (27%)	Boundary bank, track way/hollow way (48); weapons pit (39); peat cutting (34); bank, sheep fold (32); quarry (29); field boundary (25); wall (15); trial mine, practice trench, sheep shelter (11); mound (9); structure (8); bridge, farm building, platform, revetment, shelter (7); ditch, hollow, hut circle (6); bunker, stock enclosure, stone pile/spread (5); cairn, cultivation ridges, field, standing stone (4); feature, telecommunication structure (3); banked enclosure, clearance cairn, farmstead, firing range, firing range blockhouse, hut circle settlement, ring cairn?, sheep pen (2); barn, barrow?, building platform, cist?, culvert, enclosure, farmhouse, farm yard, fence, ford, pond, shooting stand?, spoil heap (1)
400-449m	216 (14%)	558 ha (22%)	Track way/hollow way (25); peat cutting (24); sheep fold (21); field boundary (19); quarry (16); shelter (14); wall (11); mine level/trial mine (10), bank, boundary bank (9); structure (8); sheep shelter (7); revetment (6); ditch, mound, stone pile/spread (4); cairn, sheep pen (3); bridge, firing range blockhouse, hollow (2); boundary wall, enclosure, feature, field, firing range, gold mine, hut circle, linear feature, marker post, ring cairn, shooting stand, spoil heap, telegraph pole (1)
450-499m	138 (9%)	302 ha (12%)	Peat cutting (17); quarry (15); bank (14); wall (12); sheep fold (11); track way/hollow way (10); sheep shelter (8); sheep pen, stone pile/spread (6); weapons pit (5); mound, shelter (4); boundary bank, structure, telecommunication structure, telegraph pole (3); spoil heap (2); bridge, feature, field, flagpole, hollow, kiln, mine shaft?, OS marker, pipeline, platform, revetment, stock enclosure (1)

Altitude	Number	Land area	Feature types
500-549m	86 (6%)	245 ha (10%)	Peat cutting (27); track way/hollow way (8); quarry (7); telegraph pole, weapons pit (6); wall (5); field boundary (4); boundary bank, sheep fold (3); bridge, hollow, sheep shelter, shelter (2); bank, cairn, enclosure, field, firing range blockhouse, marker stone, mound, practice trench, structure (1)
550-599m	54 (3%)	95 ha (4%)	Peat cutting (29); telegraph pole (6); quarry (5); boundary bank, hollow way, mound, structure, wall (2); cairn, field boundary, sheep shelter, telecommunications structure (1)
600-649m	7 (0%)	8 ha (0%)	Hut platform? (3); telegraph pole (2); flagpole, hut settlement? (1)

5.1.4 Range of site types identified

Table 4 gives the range of site types identified during the survey, with numbers of sites recorded for each type. The largest number of sites were track ways (broken down into track way, hollow way, road and military road), followed by peat cuttings, banks, sheep folds and sheep pens, field boundaries, boundary banks, weapons pits and quarries. The number of sites by Broad Class is shown in Table 5. The largest number relate to Agriculture and Subsistence (29%), followed by Monument (17%), Industrial (18%) and Unassigned (11%). Sites associated with Defence comprise 12% of the surveyed sites, and relate to the military training range.

The survey area's location within a former artillery firing range meant that there were large quantities of shell craters. These features were not individually recorded on the database, but their locations were plotted on the GIS during the survey, and their distribution is shown on Figure 7. The distributions were used to define four 'Firing Range' complexes within the overall Trawsfynydd Military Training Range.

Table 4: Number of sites by type

Feature type	Number of sites
Hollow way/track way/road/military road	144
Peat cutting	140
Bank/bank and ditch	119
Sheep fold/sheep pen	109
Field boundary	101
Boundary bank	99
Weapons pit	96
Quarry	94
Wall	76
Structure	35
Mine level/trial mine/mine/gold mine	35
Sheep shelter	33
Mound	30
Shelter	30
Cairn/cairnfield	29
Bridge/ford	26
Hollow	25

Feature type	Number of sites
Stone pile/stone spread	24
Revetment wall	20
Telegraph pole	20
Ditch/drain/drainage ditch	19
Practice trench	18
Telecommunication structure (telephone junction box)	15
Cultivation ridges	14
Platform	14
Barn/farm building	12
Pond	11
Field/farm yard	10
Culvert	10
Hut platform/building platform	10
Farmstead/farmhouse	9
Stock enclosure	9
Hut circle/round house	9
Feature	8
Firing range blockhouse	8
Linear feature	8
Enclosure	7
Bunker?	6
Flagpole/marker post	6
Pipeline	6
Spoil heap	6
Standing stone	5
Fence	4
Firing range	4
Banked enclosure/enclosed settlement	3
Boundary wall	3
Hut circle settlement	3
Ring cairn?	3
Clearance cairn	2
Kiln/tile kiln	2
Shooting stand	2
Barrow?	1
Cist?	1
Gun emplacement?	1
Leat	1
Longhouse	1
Marker stone	1
OS marker	1
Storeroom	1

Table 5: Number of sites by Broad Class

Broad Class	Number of sites	Percentage
Agriculture and subsistence	452	29%
Agriculture and subsistence?	6	0%
Communications	39	3%
Defence	147	10%
Defence?	26	2%
Domestic	16	1%
Domestic?	4	0%
Industrial	211	14%
Industrial?	67	4%
Monument	264	17%
Religious, ritual and funerary	12	1%
Religious, ritual and funerary?	5	0%
Transport	167	11%
Transport?	2	0%
Unassigned	100	6%
Water supply and drainage	20	1%
Water supply and drainage?	2	0%

5.2 Discussion of sites by period

5.2.1 Prehistoric

Whilst the number of identifiably prehistoric sites within the survey area is relatively low (15), there are also a number of sites which may be prehistoric (42), but which cannot be clearly identified as such on the basis of visual evidence. The distribution of prehistoric sites is shown on Figure 4. Several of the sites in the 'unknown' category also may relate to prehistoric activity, including mounds and possible hut platforms.

The prehistoric sites include two hut circle settlements (NPRN 275907 and 530496), one of which was previously recorded and is a SAM. The second hut group at Moel Oernant (530496) is located approximately 500m to the east of the known site at Craiglaseithin and comprises three hut circles, two of which are adjoining, with a linear stony bank running from the two northern circles to the single southern one. A possible burial mound was also recorded in the vicinity of the hut group (NPRN 530495). The hut circles are also defined by low stony banks. The features are very similar to those at the Craiglaseithin group (275907), which has a more extensive system of linear banks defining possible enclosures around three hut circles (Plate 1), and a small cairn possibly related to field clearance.

The enclosed settlement at Ffridd Bod-y-Fuddau (NPRN 303057) is also a SAM, and comprises at least one and possibly up to three round houses within an oval enclosure (Plate 2). The enclosure and structures inside are defined by substantial stony banks, and there is an entrance to the enclosure on the southeast side. The Ffridd Bod-y-Fuddau settlement may be of Iron Age to Romano-British date. An area of possibly prehistoric cultivation ridges has been recorded down the slope to the east of the settlement (HER PRN 5265); these were not visible on the ground, but a series of low banks were noted, which appear to form the boundaries of

fields (531234, 531236-531239). These fields may have been associated with the prehistoric settlement, though could be associated with medieval to post-medieval activity. The banks appear to be of similar construction to the bank enclosing the settlement and are not shown on the 1889 1st edition 25 inch: 1 mile OS map. It has been suggested that an oval stony enclosure to the west of the settlement (NPRN 400871) may have been a stock enclosure associated with the Iron Age settlement; however, this feature is shown on the 1889 OS map and may therefore be of later date.

In addition to the hut groups, a cairnfield comprising 10 identified cairns and two linear clearance banks was recorded at Ffrîdd Glap (NPRN 531186), about 600m to the southwest of the Craiglaseithin hut group. The cairns were within an area c.300m by 100m, on a level area at the top of a northwest-facing scarp (Plate 3). A second, smaller group of five possible cairns were recorded at Ffrîdd Ddu (NPRN 531221-5). There were a further nine individual cairns recorded, all but one in the vicinity of Llyn Gelli Gain. Several cairns had already been recorded in this area on the HER, though it was not always possible to correlate the HER records with the features identified on the ground. Five additional possible cairns of unknown period were recorded. Some of these may relate to naturally outcropping rock forming small turf-covered mounds rather than to constructed features.

5.2.2 *Roman*

Eight features of probable Roman date were recorded. Further features of unknown period may relate to Roman features, including parts of trackways and low mounds thought to be associated with the Sarn Helen Roman road. Three mounds are recorded on the HER (PRN 5269) and four very ephemeral mounds were noted during the survey, none of which could be definitively identified as Roman (NPRN 531270-531271, 531279-531280). The location of Roman sites is shown on Figure 4, along with the location of known and proposed Roman roads (from Hopewell 2004).

The known or likely routes of up to four Roman roads pass through the survey area. The most secure route is the north-south Sarn Helen road from Tomen y Mur to Brithdir, which crosses the western edge of the survey area, running on a similar alignment to a modern minor road. Two stretches of this have previously been recorded on the NMR (PRN 300006 and 309188), at Ffrîdd Glap and Pen-y-Stryd, and stretches are also recorded on the HER (PRN 3845, 17736, 17737, 17741, 17742, 17743, 17746). Five features which appear to have been associated with this road were recorded during the survey (NPRN 309188, 531272, 531275, 531530, 531531). In some cases, the sites were only visible as track ways with no distinguishing features, whereas at sites 531272 and 531531 slight ditches and banks were visible to either side.

The east-west routes towards the northern end of the survey area are thought to relate to roads running between Tomen y Mur and Caer Gai. Only two small sections of the four branching routes are categorised as 'known routes', at Moel yr Wden (HER PRN 17855, NMR 309126), with the rest being proposed or predicted routes. Two sections of the 'known' parts of the Moel yr Wden route were recorded during the survey (NPRN 530618 and 530900). The latter was a more substantial feature, with banks to either side (Plate 4), whereas 530618 was represented only by a break in slope forming a slight terrace. A standing stone of unknown date (NPRN 530628) was located along the better-preserved part of the track, and could represent a marker stone associated with the Roman road (Plate 5). A 'proposed' northwest-

southeast aligned branch of this road may be represented by a hollow way visible between boggy areas (NPRN 530569). No Roman features were identified along the northernmost 'proposed' routes between Tomen y Mur and Caer Gai, though parts of these routes are associated with well-defined post-medieval to modern farm tracks.

The only other feature of probable Roman date identified during the survey was a mound thought to represent a tile kiln, close to the Sarn Helen road at Pen-y-Stryd (Plate 6). This feature (NPRN 303042) is one of three previously recorded by the NMR and HER in this vicinity. The other two probable kilns were not located during the survey. The foundations of a possible Roman building previously recorded at Moel y Slaten (HER PRN 4274) were also not located during the survey.

5.2.3 *Medieval*

No clearly medieval features were identified during the survey, though one feature possibly of medieval date was recorded. This was a rectangular structure defined by low stony banks on a ridge of land at Ffridd Ddu (NPRN 531289; Plate 7). It may be associated with a possible deserted rural settlement recorded from aerial photographs (NPRN 91976), though it is isolated from the other recorded features. The other features in the area include ruined drystone structures, which could represent small buildings or sheep folds (Plate 8), and stretches of field boundary walls associated with small fields. Some of these features are associated with post-medieval sheep folds depicted on the 1889 OS map, though there are more features visible on the ground than are shown on the map. This suggests there may have been an earlier farmstead in the area which had been abandoned by the 19th century (NPRN 531214-531217, 531229-531233, 531288-531289, 531291-531301). There are also stretches of bank which may represent medieval or earlier fields in this vicinity (NPRN 531234, 531236-531241).

It is possible that some of the farmsteads, field boundaries and sheep folds recorded in the survey may have originated in the medieval period, but on visual evidence alone, it is not possible to state this with any certainty. In particular, there are a series of ephemeral stony banks running intermittently along either side of the Afon Gain near Buarth-Brwynog, which appear to represent old boundary features. It is possible that the banks on the southeast side of the river could relate to an old township/community boundary, though they could potentially have originated as the boundary of the medieval Cwm Cedryn monastic grange. Some sections of these banks/walls were shown on the 1st and 2nd edition OS maps, and they may be associated with post-medieval fields. The location of the grange is shown on Figure 4.

5.2.4 *Post-Medieval*

This period represented the largest number of identified sites, with 321 classified as post-medieval and 672 as probably post-medieval. The large quantity of sites makes summarisation difficult, but most can be broken down into the agriculture and subsistence, industrial, transport and unassigned broad classes. The locations of post-medieval sites are shown on Figure 5. Features within the unassigned class include the remains of structures which could represent sheep folds or small buildings, as well as hollows of unknown origin, possibly associated with industrial activity. Some of the post-medieval sites may have originated in the medieval period, including farmsteads, boundaries, structures, quarries and mining remains, though it is not possible to establish this based on visual evidence alone.

Agriculture and Subsistence

The agriculture and subsistence category represents 403 sites of probable and possible post-medieval date. The features include field boundary walls and banks, sheep folds and stock enclosures, as well as short, isolated stretches of wall identified as sheep shelters. These features were associated with seven farmsteads, Buarth-Brwynog, Dôl y Moch Isaf I and II, Dôl-y-Moch Uchaf, Hafod-y-Gareg, Hafod-y-Plâs and Nant-Lliwgys, as well as with the surviving farms outside the survey area. The farmsteads comprised groups of small, ruined stone-built structures with associated yards and stock enclosures, within wider irregularly-shaped fields defined by drystone walls. Historic OS mapping shows many of the buildings as roofed, but the poor level of survival means that it was not always possible to distinguish between barns and domestic structures. A farmhouse was identified at Buarth-Brwynog (NPRN 530721) due to the survival of part of the gable wall and fireplace (Plate 9), and probable domestic structures were recorded at the three Dôl-y-Moch farmsteads. Dôl-y-Moch Isaf Farmstead I (NPRN 530505) was interesting in that the probable farmhouse building appeared to have been cut into the hillside, and many of the surrounding enclosure walls survived as banks rather than stone walls (Plate 10), suggesting it may have had a relatively early origin.

The remainder of the structures associated with farmsteads were recorded as farm buildings or barns. The seven farmsteads are all located in the valley of the Afon Gain, on the generally lower, gently sloping ground at an altitude of between 300m and 359m aOD. The condition of survival varied, but only a few walls survived to more than 2m in height. Buildings interpreted as barns generally have a better level of survival, and contain features allowing them to be identified. A building at Cae Gwair (NPRN 531125) may be associated with the HER record relating to Cae Gwair old house (PRN 5068). The building was labelled 'Cae Gwair' on the 1901 OS map, but appears from visible evidence to be a barn (Plate 11). A further farmstead shown on the 1889 OS map at Dôl-y-Mynach Uchaf, located just outside the survey area, appears to have been substantially destroyed by artillery training. All of the farmsteads were shown on the 1901 OS map, and appear to have been abandoned c.1905 in association with the establishment of the artillery firing range.

A further possible farmstead was recorded at Ffrîdd Ddu (also known as Ffrîdd Bod-y-Fuddau). This comprised more ephemeral remains of several structures and walls (NPRN 531292). No farmstead is shown in this location on the historic OS mapping, though a number of sheepfolds are shown. There are more structures and enclosures visible on the ground than are depicted on the historic maps, and this area is close to NMR and HER records relating to a possible deserted rural settlement. More detailed survey in this area could assist in establishing the layout and phasing of enclosures and structures. There are also several boundary banks in this area which could relate to earlier (prehistoric to medieval) agriculture or settlement.

Sheep folds comprise a large proportion of the post-medieval sites (Plate 12). These are generally isolated features, though some are found in the vicinity of farmsteads. Sheep folds were found at all altitudes from 250m to 550m aOD. They are of drystone construction, and range from simple pens to more complex groups designed to sort and isolate sheep. Some have associated sheep dips. The level of survival varies, with some structures visible only as the base of tumbled walls and others still appearing to be in regular use. Field boundaries also

vary considerably in terms of preservation. In some cases, only stony banks or single courses of stone walls survive, whereas others have been kept in good repair, or have been modified through the addition of wire fences.

Industrial

Post-medieval industrial features include quarries, mines and peat cuttings, as well as a possible kiln at Craig y Ffolt. Quarrying appears to have been undertaken mainly for building stone and slate, including for the construction of field boundary walls. Some of the quarrying remains suggest that extraction of quartz was also a factor. The quarries vary in size from small stone extraction hollows to rock faces over 50m in length. Quarrying may be over-represented in the surveyed sites, as the patterns of natural fracturing of exposed rock faces produces similar features to those related to deliberate extraction of stone. Where it is unclear, this has been noted in the short text descriptions. The larger quarries tend to be located to the north of the Afon Gain, around Gelli Gain, Pig Idris and Moel Oernant (Plate 13).

Mining remains comprise 34 sites recorded during the survey. The majority of mining remains are located on the slopes to the north and south of Moel Ddu, at Ffridd Ddu and Llyn Gelli Gain, with other small groups at Nant Cae-Gwair, Nant Braich y Ceunant and Bryn yr Helfa. The remains generally comprise linear hollows leading towards shaft openings in the face of hillsides (Plate 14). Five of the sites appear to be associated with gold mines recorded on the HER (531287, 531322, 531335, 531509-510), whilst others at Afon Gain and Nant Braich y Ceunant are shown on historic OS maps as trial copper mines (NPRN 530876, 531100-531102). The exact date of the mining activity is unclear, but in some cases shafts appear to have been excavated and abandoned between the 1899 and 1901 OS surveys. Some of the workings are not shown on any maps and may represent prospecting.

The largest number of sites in the industrial category comprise peat cuttings. These features may be over-represented, as in some cases it was difficult to distinguish natural peat erosion from deliberate peat cutting. Where this was the case, it has been noted in the short text description. Peat cuttings were widely distributed across the survey area, at altitudes from 300m to 549m aOD.

Transport

Transport features comprise track ways, hollow ways and bridges. Hollow ways represent routes defined by a worn hollow, sometimes with banks to either side, whereas track ways tend to be level or terraced features with no distinct hollow, and sometimes with gravel surfacing. The features included well-established farm tracks or post-medieval routes to and from farmsteads (Plate 15), as well as routes which may have been associated with industrial extraction.

5.2.5 *Modern*

The survey identified 295 modern or probably modern sites. These can mainly be broken down into two broad categories: farm infrastructure features (field boundaries, sheep folds, ponds, bridges, culverts); and defence (practice trenches, weapons pits, firing range blockhouses, military roads, telecommunication structures). The locations of all modern sites are shown on Figure 6, with defence-related sites and the extent of the military range shown on Figure 7.

Defence and telecommunications

The presence of the military training camp and firing range has resulted in a large number of defence-related features. The most distinctive are eight firing range blockhouses, stone and concrete structures designed as shelters associated with mortar and shell-firing exercises. One of these has been reconstructed (NPRN 531342), whilst two further examples survive in a relatively intact condition (530208, 530604; Plate 16). Other examples are visible as semi-circular stone and earth banks with wood and metal fragments on the interior. Large quantities of shell and mortar craters were visible with the survey area. These have not been individually recorded but dense concentrations were plotted. Telecommunications infrastructure associated with the firing range included numbers of telephone junction boxes and telegraph poles (Plate 17). Narrow pipe trenches close to blockhouses and telephone junction boxes probably represent the location of buried cables. Possible gun emplacements or enclosures were recorded at Mynydd Bâch, as well as substantial track ways which appear to be associated with the movement of heavy guns and tanks, suggesting that this was a frequent location for positioning guns for training.

As well as sites associated with the artillery firing range, there were also a number of practice trenches, bunkers and weapons pits associated with late 19th to early 20th century infantry training. Concentrations of these features were recorded at Mynydd Bâch and Pig Idris and a small group at Moel yr Wden. Many appear to relate to World War I training, comprising linear hollows in a zigzag alignment characteristic of communication trenches leading to smaller firing trenches and bunkers. These are generally positioned on raised ground, and occasionally on opposing ridges. The features at Mynydd Bâch included possible tunnels or collapsed trenches (Plate 18), some of which are causing the farm road through the area to be undermined. Some of the features identified as weapons pits may be shell or mortar craters, but most comprise rectangular or V-shaped slit trenches, or more irregular foxholes with banking on the downslope side. A group of small stone-built wind-break shelters or shooting stands in the vicinity of Pig Idris and Moel Ddu are also thought to be associated with military training (Plate 19).

Agriculture and subsistence and transport

Further modern features include sheep folds, field boundary walls, track ways, bridges and culverts, artificial ponds and ditches which appear to be associated with drainage and services. One more unusual feature is a modern standing stone, Carreg Gareth (NPRN 531305), which appears to have been erected as a memorial stone close to the prehistoric enclosure at Ffridd Bod-y-Fuddau. A group of concrete building platforms in the vicinity of Pig Idris and Gelli Gain may be associated with military or industrial activity, or possibly to services (Plate 20).

5.2.6 *Unknown*

There are 181 sites from the survey classified as being of unknown period. These mainly relate to the same kinds of features as discussed for the prehistoric to modern sites, including boundary banks, cairns, ditches, building platforms, transport routes, structures, sheep folds, quarries, etc., which had no clear evidence for date. Other sites included cultivation ridges, which could not be definitively assigned to a particular date, though are likely to be associated with medieval to post-medieval agricultural activity. A possible hut group at Foel Boeth (NPRN 530660) comprised three rectangular platforms, possibly for huts. The visible features were

insufficient to indicate whether this was likely to be a prehistoric settlement. It is the only hut group on the eastern side of the survey area, and the only other possible prehistoric features in the vicinity comprise two mounds.

Undated mounds were a further site type assigned an unknown date. Some of these features may represent naturally outcropping rock, or could be cairns or burial mounds. A possible mine shaft recorded at Gallt y Daren was filled with water and heath vegetation, and could not be definitively assigned to this category. It is possible that it represented a large shell crater, though the feature was more than 1m deep. More detailed survey and research may be able to establish the date of some of the sites assigned to an unknown period. The locations of sites of unknown period are shown on Figure 8.

5.3 Peat Deposits

The location of peat deposits has been plotted from geological maps and aerial photographs, as well as from notes made during the survey. The distribution of peat deposits is shown on Figure 9. Peat deposits have the potential to preserve environmental data such as pollen and plant remains, which can enable the reconstruction of past environments and give information on environmental changes and land use. The deposits within the survey area include large areas of blanket peat, which can contain information on environmental changes at a regional level, as well as smaller areas of mire peat. Environmental data from mire peat can provide information on more localised land use and environmental changes, which is particularly useful where peat is found in proximity to known settlement sites.

5.4 Limitations of Survey

The visibility conditions during the survey were generally good. There was more vegetation cover during the later parts of the survey which caused more limited visibility, but this was mainly restricted to a few areas around Ffridd Ddu and Ffridd Bod-y-Fuddau. Weather conditions during June/July were very poor, but did not significantly affect the visibility of features. The presence of bogs meant that some areas were walked in less detail than others, though evidence from walked areas indicates that few sites are visible in these ground conditions. Areas walked in less detail included the extensive blanket peats within the SSSI at the northern end of the survey area, the area between Moel Uchaf Dôl-Haidd and Moel y Slates, areas to the north of Dôl-y-Moch, and low-lying areas at Waen Blaen-Lliw. Sufficient areas were walked to characterise these bogs as containing low number of sites visible at ground level.

6 DISCUSSION

The survey identified 1540 sites, the majority of which relate to post-medieval agriculture and stock management and to military artillery training undertaken in the first half of the 20th century. There are also numerous sites associated with post-medieval mining, quarrying and peat cutting activities, and previously unknown prehistoric sites have been identified. The survey has substantially increased the number of known sites within the survey area, though not all of the sites previously recorded by the NMR and GAT HER were found.

Prehistoric to Romano-British

As well as the two known prehistoric to Romano-British settlement sites, the survey recorded a further hut group of probable prehistoric date and at least one cairnfield, as well as two small groups of possible hut platforms and hut circles of unknown date. The cairnfield is an example of a relatively rare monument in the area. Possible burial mounds were also recorded, though these could not be conclusively identified as being of prehistoric date. Boundary banks that could be associated with prehistoric cultivation were recorded at Ffridd Bod-y-Fuddau. No new features of identifiably Roman date were identified, though a known tile kiln and stretches of Roman road were recorded.

Medieval

Only one site of probable medieval origin was recorded, a possible longhouse at Ffridd Bod-y-Fuddau. Further sites which may have been of medieval date include remains of structures and field walls in the vicinity of the longhouse, which are associated with a possible deserted rural settlement previously recorded from aerial photographic evidence. The date of these features are unclear, and some were associated with post-medieval sheep folds. No settlement was shown in this area on historic mapping, though some of the field walls were in use in the late 19th century. It is possible that some of the farmsteads within the survey area originated in the later medieval period, though there is currently no definitive evidence for this.

Post-Medieval

The majority of sites identified were of probable post-medieval date (993). These included farmsteads, stock enclosures, sheep folds, field boundaries, track ways, mines, quarries and peat cuttings. Three of the seven farmsteads identified had previously been recorded by the HER. All of the farmsteads were in the valley of the Afon Gain, whilst the sheep folds were dispersed across the whole of the survey area. The farmsteads were in existence in the 19th century, and may have had late medieval to early post-medieval origins. Their locations correspond to those of the farms in Cwm Prysor, being located on the lower lands to either side of the river. They were all abandoned at the beginning of the 20th century following purchase of the land by the War Department. Mine remains comprised adits or levels and associated spoil heaps. Where recorded, these appear to have been copper and gold mines. Quarrying appears to have been common on the exposed rock outcrops across the survey area, though most of the quarries appear to have been small scale enterprises for field walls and local structures.

Modern

The survey area contains a large number of sites associated with military training (173). These include firing range blockhouses, gun emplacements and telecommunications structures associated with the artillery firing range, as well as practice trenches which appear to be associated with First World War infantry training. The majority of other sites of modern date comprise stock management features, field walls and track ways.

7 RECOMMENDATIONS FOR FURTHER WORK

Sites where further work would be informative are shown on Figure 9. There is a high potential for environmental sampling within the survey area. It is recommended that samples are taken from a variety of deposits across the survey area to provide comparative information on regional and local environmental conditions. It would be particularly useful to undertake environmental sampling on mire peat deposits in the vicinity of the prehistoric settlement sites at Craiglaseithin and Moel Oernant (NPRN 275907, 531011) and close to the Romano-British settlement and possible medieval deserted rural settlement at Ffrîdd Bod-y-Fuddau (303057, 91976).

More detailed survey is recommended for the prehistoric settlement sites at Craiglaseithin and Moel Oernant, and for the cairnfield at Ffridd Glap (NPRN 531186). It is also recommended that a detailed survey of the complex features at Ffrîdd Bod-y-Fuddau is undertaken, to record the post-medieval and possible earlier structures and boundary features and areas of cultivation ridges. This could include aerial photographic and Lidar mapping and documentary research as well as topographic survey. This survey may assist in phasing the remains and establishing a chronology of activity.

The post-medieval farmsteads along the valley of the Afon Gain would also benefit from more detailed survey and documentary research. Some detailed survey in this area has been undertaken by Landscape Archaeology MA students at the University of Sheffield, and the results of this work should be made available to the public. The survey area also offers the scope for more detailed survey and documentary work on the post-medieval copper and gold mining remains.

The military training features within the survey area offer considerable potential for further research. The practice trenches at Mynydd Bach are interesting examples and further work could include detailed survey of their layout and their location in relation to topographical features, as well as documentary research on First World War training methods and practices. There is also the potential for further recording of the range and type of firing range blockhouses and shelters.

9 ACKNOWLEDGEMENTS

ArcHeritage would like to thank all the landowners within the survey area, who permitted access for the fieldwork. Thanks are also due to Snowdonia National Park Authority for facilitating access, and to John Roberts of the SNPA for advice on archaeological issues. David Leighton of the RCAHMW provided information, advice and monitoring for the project, and Angharad Stockwell of Gwynedd Archaeological Trust provided HER data. Dr. Robert Johnston of the Department of Archaeology at the University of Sheffield coordinated the field survey school for the MA in Landscape Archaeology, and provided information and assistance to the survey project.

APPENDIX 1 – GAZETTEER OF PREVIOUSLY RECORDED SITES

A gazetteer of previously recorded archaeological sites with their associated survey reference.

NMR NPRN	HER PRN	Site Name	Status	Associated NPRN from Cwm Prysor Survey
32399		WELL NE OF ERW DDWFR	Not found - possibly outside survey area?	
65763	14740	ARTIFICIAL POND, MOEL BOWYDD	Not found in survey - located in boggy area.	
91976	5266; 15670	FFRIDD BOD-Y-FODDAU DERSERED RURAL SETTLEMENT	Series of small enclosures, structures and walls possibly associated, but some appear to be post-medieval sheep folds/fields	531214-531217, 531229-531233, 531288-531289, 531291-531299, 531301
275907	1649; 6149	HUT CIRCLE AND FIELD SYSTEM AT CRAIGLASEITHIN	Found	275907
303042	2893	ROMAN TILE KILNS EAST OF PEN-Y-STRYD	Found	303042
303057	1604	FFRIDD BOD-Y-FUDDAU, SETTLEMENT	Found	303057
308959		FFRIDD BOD-Y-FUNDAU, CULTIVATION FEATURES	Not found in survey - features may be too faint at ground level, but visible on APs	
308960		FFRIDD BOD-Y-FUNDAU, RECTANGULAR BUILDING	Probably same feature as 531231 (Ffridd Ddu Structure IV).	531231
309146		MOEL-YR-WDEN, SHEEPFOLD ON SW SLOPES OF	Found	309146
309147		MOEL-YR-WDEN, RELICT WALLS ON SW SLOPES OF	Not found in survey	
400555		MOEL-Y-SLATES: TRACKWAY AND LINEAR FEATURES; RR68 (ALTERNATIVE ROUTE)	Site 530618 (Moel y Slates Track Way IV) is probably part of this feature	530618
400864		LLYN GELLI-GAIN, STRUCTURE S OF	Found	400864
400865		LLYN GELLI-GAIN, STRUCTURE (FOLD) S OF	Not recorded in survey	
400866		LLYN GELLI-GAIN, SETTLEMENT FEATURES S OF	Not recorded in survey	
400867		LLYN GELLI-GAIN, BUILDING COMPLEX S OF	Probably associated with site 531357 (East of Pig Idris Sheep Fold I)	531357
400871		FFRIDD BOD-Y-FUDDAU, ENCLOSURE	Found	400871
401025		BEDD PORUS, CULTIVATION FEATURES N OF	Not found in survey, but nearby site 531426 (North of Llech Idris Cultivation Ridges I) may be associated	531426?
401035		CRAIG-Y-FFOLT; GRAIG-Y-FFALD, SHEEP FOLD	Found	
401122		PIG IDRIS, SHEEPFOLD COMPLEX ON E OF	Not recorded in survey	
401164		FFRIDD BOD-Y-FUDDAU CULTIVATION FEATURES - NORTHERN AREA	Not found in survey, but nearby sites 531319 and 531323 (Ffridd Ddu Cultivation Ridges I and II) may be associated	531319, 531323

NMR NPRN	HER PRN	Site Name	Status	Associated NPRN from Cwm Prysor Survey
402364		CRAIGLASEITHIN, CIRCULAR FEATURE	Rectangular structure 530501 (Craiglaseithin Structure I) is on the same site, but no circular feature was recorded	530501
402365		CRAIGLASEITHIN, BUILDING	Probably same feature as 531180 (Craiglaseithin Sheep Fold I)	531180
406194		PEN-Y-STRYD, EARTHWORKS EAST OF	One rectangular platform, 531465 (Pig Idris Platform I), appears to relate to this site, but no circular hut platform was recorded in the survey	531465
300006 309188	3845; 17736- 17737; 17741-3; 17746; 17827; 17853	Sarn Helen Roman Road, Tomen y Mur to Brithdir: four 'known' sections, one discounted section, two proposed sections, one predicted route	Section recorded at 309188, 531530; other sections possibly associated with features 531272, 531275, 531531, 531404	309188 531530 531272 531275 531404 531531
309126 400555	17855; 17875- 17878	Tomen y Mur-Caer Gai Roman Road (RR68), two 'known' sections, two proposed and one predicted section	Features recorded in association with the two 'known' sections (530900, 530618)	530618 530900
309145	17525	Proposed route or branch of Tomen y Mur to Caer Gai Roman Road at Bwlch y Bi	Site 530569 is probably part of this route	530569
	17517- 17518, 17521- 17523, 17702	Possible alternative route of the Tomen y Mur to Caer Gai Roman road (proposed)	Possibly associated with track ways 530785, 531046, 531079	530785 531046 531079
	1600	Grass mound, Pen-y-Stryd	Not recorded in survey	
	1601	Roman kiln near Pen-y-Stryd	Not recorded in survey	
	1653	Cairn, Llyn Gelli Gain	Probably associated with site 531430 (North of Gelli Gain Ring Cairn I)	531430
	1690	Cairns, Llyn Gelli Gain	Possibly associated with site 531375 (Llyn Gelli Gain Cairn III)	531375
	1691	Cairn, Llyn Gelli Gain	Possibly associated with three cairns at site 531450 (Northeast of Gelli Gain Cairn I)	531450
	4274	Building foundations, Moel y Slates	Not recorded in survey	
	4293	Hut circle, Hendre Bryn Crogwydd	Not recorded in survey	
	5068	Cae Gwair old house	Not recorded in survey	
	5265	Cultivation ridges, Ffridd Ddu	Possibly related to 308959. Not visible on the ground, but visible from AP mapping. Banks 531234, 531236-531241 may be associated	308959; 531234, 531236-531241
	5267	Cultivation ridges, Ffridd Glap	Possibly related to 531398 and 531399	531398, 531399
	5268	Huts/walls, Afon Gain	Possibly associated with sheepfold 531417, hut circle 531352 and features 531355-531356	531417, 531352, 531355-531356
	5269	3 low mounds, Bryn Llefrith	Possibly associated with slight mounds 531270-531271, 531279-531280	531270-531271, 531279-531280
